The use of Ronafix for concrete repair

		- Ale
	- Reinforcing steel	General Specification
	<ul> <li>Spalled concrete to be repaired</li> </ul>	<ol> <li>Prepare and assess substrate; clean reinforcing steel</li> </ol>
2300	- Substrate concrete	2. Prime steel with two coats of 1:1 Ronafix:
	<ul> <li>Exposed steel cleaned and primed</li> <li>Spalled area cut out</li> </ul>	<ul> <li>cement primer</li> <li>3. Damp concrete; prime concrete with one coat of Ronafix: cement primer</li> </ul>
	ready for repair ~ Substrate concrete cleaned and primed	<ol> <li>To the wet or tacky primer apply Ronafix modified mortar to required thickness using multiple</li> </ol>
	- Completed repair	layers as required
	<ul> <li>Damaged concrete replaced with Ronafix mortar mix design D</li> </ul>	<ol> <li>Cure with Monocure (and apply compatible Ronacrete surface coatings as necessary)</li> </ol>

MIX DESIGN	D CONCRETE REPAIR OVER REINFORCING STEEL 6mm/35mm*** (min repair depth around steel = 15mm)		A CONCRETE REPAIR NOT OVER REINFORCING STEEL 6mm/35mm***	
ALL MIXES BASED ON DRY SAND				
min/max depth per layer				
	by weight	by volume	by weight	by volume
cement	50kg	1	50kg	1
medium sharp sand**	125kg	2	125kg	2
Ronafix	14 litres	3:1*	9 litres	1:1*
water (approx)	4 litres		9 litres	
yield (approx) m <sup>3</sup>	0.1		0.1	

\* Ronafix: water gauging liquid added to cement and sand to achieve workability. \*\*

These mix designs are based on the use of dry sand. The amount of water in the sand or aggregate must be taken into account when calculating the quantity of water to use. typically up to 35mm of repair mortar can be applied in to pockets and voids in a single layer depending on shape and size of repair and application technique. \*\*\*

## RONAFIX:CEMENT PRIMER MIX DESIGN

	by weight	by volume	
Ronafix	1 litre	1	
cement	1 kg	1	
coverage	3-4m <sup>2</sup> per litre of Ronafix

## The use of Ronafix for concrete repair

### Preparation

All concrete and defective material identified for removal must be action mixer (eg. Creteangle or drill and paddle) will provide removed back to a suitable substrate which is sound and stable and which will accept the repair mortar.

Reinforcing steel in the repair area must be exposed, and concrete Placing cut back along the length of the steel to expose not less than 25mm Apply the mortar in layers to achieve the required thickness, reform of clean uncorroded steel. Loose rust and scale must be removed (eg. by the use of wire brushing and/or emery cloth or sand paper). Cut thickness will vary according to the nature of the substrate, the around the periphery of spalled areas to a minimum depth of 6mm at shape and size of area being repaired and mixing and application 90° to avoid dished edges and feather edged repairs.

The concrete must be removed around the steel to allow not less Materials may be applied using a combination of hand packing or than 15mm of repair mortar to be placed around the steel. Corroded traditional tools. The concrete repair mortar must be well compacted steel must be replaced where considered necessary by the engineer.

All removal of concrete and steel must be carried out in accordance Apply the concrete repair mortar in successive layers to achieve the with the specifiers recommendations.

All surfaces must be cleaned to remove loose dust, debris and surface the next layer. contamination which may prevent adhesion of repair mortar to concrete and steel.

When repairing chloride contaminated concrete steel must be grit aid adhesion. blasted back to bright steel; the method used to prepare concrete surfaces may differ and the Ronacrete Technical Department should Cure the finished repair with Monocure 50 or tight fitting polythene. be consulted.

#### Damping

concrete surfaces to be repaired. Remove any standing water. Water used must be clean and of potable quality.

#### Priming

to become tacky, not dry. If the primer dries it must be thoroughly correct installation lies with the contractor and not with Ronacrete scarified and reapplied.

When priming coat on steel is tacky, brush a single coat of primer on to the damp concrete or substrate and apply a second coat on to the steel. Ensure that the first priming coat applied to the steel is not removed during the application of the second coat.

The Ronafix repair mortar must be applied on to the wet or tacky primer before the primer dries. If the primer dries it must be thoroughly scarified and reapplied.

#### Mixing

Mix the Ronafix modified mortar and apply in layers to achieve the required thickness, reform the original profile of the concrete and cover reinforcing steel. Layer thickness will vary according to the nature of the substrate, the shape and size of area being repaired and mixing and application technique.

Ronafix modified mortars can be mixed by hand or machine. Machine mixing will more easily provide a mortar with even dispersion of mix
